Plantar fasciitis It results in pain in the heel and bottom of the foot that is usually most severe with the first steps of the day or following a period of rest. Pain is also frequently brought on by bending the foot and toes up towards the shin. It affects both feet in about one-third of cases. Night splints maintain the ankle in a neutral position Plantar fasciitis or plantar heel pain is a disorder of the plantar fascia, which is the connective tissue that supports the arch of the foot. Some evidence supports the use of night splints for 1–3 months to relieve pain after six months. The pain typically comes on gradually df8cf54425
