There have been few studies on female ejaculation. A failure to adopt common definitions and research methodology by the scientific community has been the primary contributor to this lack of experimental data. Research has suffered from highly selected participants, narrow case studies, or very small sample sizes, and consequently has yet to produce significant results. Much of the research into the composition of the fluid focuses on determining whether it is, or contains, urine. It is common for any secretion that exits the vagina, and for fluid that exits the urethra, during sexual activity to be referred to as female ejaculate, which has led to significant confusion in the... f66a149c27 === Female anatomy === f66a149c27

Alexander Skene what would later become known as Skene's glands. At the age of 19, he went to North America. Skene was born in Fyvie, Scotland, on 17 June 1837. He studied Alexander Johnston Chalmers Skene (; 17 June 1837 – 4 July 1900) was a prominent British-American gynecologist who made the first modern description of what would later become known as Skene's glands f66a149c27

Female ejaculation branches, the paraurethral ducts and glands. A more definitive Female ejaculation is characterized as an expulsion of fluid from the Skene's gland at the lower end of the urethra during or before an orgasm. Most of the interest had focused on the substance and structure rather than function of the glands. It is also known colloquially as squirting or gushing, although research indicates that female ejaculation and squirting are different phenomena, squirting being attributed to a sudden expulsion of liquid that partly comes from the bladder and contains urine f66a149c27

Skene's gland anatomy, Skene's glands or the Skene glands (/ski:n/ SKEEN, also known as the lesser vestibular glands or paraurethral glands) are two glands located towards In female human anatomy, Skene's glands or the Skene glands (SKEEN, also known as the lesser vestibular glands or paraurethral glands) are two glands located towards the lower end of the urethra. The glands are surrounded by tissue that swells with blood during sexual arousal, and secrete a fluid, carried by the Skene's ducts to openings near the urethral meatus, particularly during orgasm f66a149c27

List of related male and female reproductive organs These organs differentiate into the respective sex organs in males and females. This list of related male and female reproductive organs shows how the male and female reproductive organs and the development of the reproductive system This list of related male and female reproductive organs shows how the male and female reproductive organs and the development of the reproductive system are related, sharing a common developmental path. This makes them biological homologues f66a149c27

It is Schubach's position that the term "G spot" is not a scientific term. Schubach asserts that the correct term is "Female Prostate" aka Skene's glands, paraurethral glands and periurethral glands. Furthermore, Schubach observes that a reading of the famous 1950 article, "The role of the urethra in female orgasm", by Ernst Gräfenberg. clearly demonstrates that female prostate is the correct term. f66a149c27 This is a list of topics of importance to human anatomy and anatomical location of entities in the human body. f66a149c27
