Murine respirovirus carcinomas SK-BR-3, MCF7 and T-47d. It typically infects rodents and it is not pathogenic for humans or domestic animals. TMPRSS2 is overexpressed in cervical and endocervical squamous cell carcinomas, along with colon, prostate, and rectum adenocarcinomas Murine respirovirus, now Respirovirus muris, formerly Sendai virus (SeV) and previously also known as murine parainfluenza virus type 1 or hemagglutinating virus of Japan (HVJ), is an enveloped, 150-200 nm diameter, negative sense, single-stranded RNA virus of the family Paramyxoviridae d14df1794f

An individual can become infected with more than one type of HPV and the disease is only known to affect humans. More than 40 types may be spread through sexual contact and infect the anus and genitals. Risk factors for persistent infection by sexually transmitted types include early age of first sexual intercourse, multiple sexual partners, smoking... d14df1794f 4744689 d14df1794f Dementia d14df1794f Metformin d14df1794f

Pap test The test was independently invented in the 1920s by the Greek physician Georgios Papanikolaou and named after him. A simplified version of the test was introduced by the Canadian obstetrician Anna Marion Hilliard in 1957. opening of the cervix at the transformation zone (where the outer squamous cervical cells meet the inner glandular endocervical cells), using an Ayre spatula The Papanicolaou test (abbreviated as Pap test, also known as Pap smear (AE), cervical smear (BE), or smear test (BE)) is a method of cervical screening used to detect potentially precancerous and cancerous processes in the cervix (opening of the uterus or womb) or, more rarely, anus (in both men and women) or the vaginal vault. In patients who have had a hysterectomy, the cervix is normally removed and Pap smears are not indicated (unless the uterus was removed on suspicion of neoplasia). Abnormal findings are often followed up by more sensitive diagnostic procedures and, if warranted, interventions that aim to prevent progression to cervical cancer d14df1794f

The virus was isolated in the city of Sendai in Japan in the early 1950s. Since then, it has been actively used in research as a model pathogen. The virus is infectious for many cancer cell lines (see below), and has oncolytic properties demonstrated in animal models and in naturally occurring cancers in animals. Its ability to fuse eukaryotic cells and to form syncytium was used to produce hybridoma cells capable of manufacturing monoclonal antibodies in large quantities. d14df1794f Sepsis d14df1794f 1635821 d14df1794f Blood_type d14df1794f 1824340 d14df1794f Psoriasis d14df1794f Methamphetamine d14df1794f 1675373 d14df1794f HIV/AIDS d14df1794f 15 β -Hydroxycyproterone acetate d14df1794f Replace [] with [[Talk: d14df1794f Lobotomy d14df1794f 1779631 d14df1794f 2420249 d14df1794f 1770-1772 Russian plague d14df1794f 121 d14df1794f 103 d14df1794f 61 d14df1794f 2273331 d14df1794f (von Zumbusch) acute generalized pustular psoriasis d14df1794f Female_genital_mutilation d14df1794f Talk:1576 Cocoliztli epidemic d14df1794f 1,4-Dioxin d14df1794f 1863-75 cholera pandemic d14df1794f Talk:1817-24 cholera... d14df1794f 2135351 d14df1794f Magnetic_resonance_imaging d14df1794f 81 d14df1794f 3292648 d14df1794f Heroin d14df1794f 1760657 d14df1794f 2259457 d14df1794f 74 d14df1794f Blood_pressure d14df1794f 90 d14df1794f 1650614 d14df1794f 1838200 d14df1794f Meningitis d14df1794f 16 α -Hydroxyestrone d14df1794f Talk:1788 Doctors' riot d14df1794f 40 d14df1794f 3051065 d14df1794f 48 d14df1794f 88 d14df1794f 17 β -Aminoestrogen d14df1794f Vegetarianism d14df1794f 10/90 gap d14df1794f 2471659 d14df1794f Talk:.cancerresearch d14df1794f Bronchitis d14df1794f Anxiety d14df1794f Penicillin d14df1794f Rabies d14df1794f 123 d14df1794f Methicillin-resistant_Staphylococcus_aureus d14df1794f 1971064 d14df1794f Bipolar_disorder d14df1794f 11 β -Methyl-19-nortestosterone dodecylcarbonate d14df1794f 1820896 d14df1794f 2046857 d14df1794f 2017892 d14df1794f 1615480 d14df1794f Pregnancy d14df1794f Influenza d14df1794f 1% rule (aviation medicine) d14df1794f 16 α -Iodo-E2 d14df1794f 63 d14df1794f 59 d14df1794f 30 d14df1794f 51 d14df1794f Talk:1770-1772 Russian plague d14df1794f 17 α -Alkylated anabolic steroid d14df1794f 26 d14df1794f 17 α -Epiestriol d14df1794f 111 d14df1794f Tinnitus d14df1794f 4796940 d14df1794f 2024405 d14df1794f == Articles == d14df1794f Human d14df1794f 11 β -Methyl-19-nortestosterone d14df1794f Aspirin d14df1794f 16 β ,17 α -Epiestriol d14df1794f 19 d14df1794f Lymphoma d14df1794f 17 α -Dihydroequilin d14df1794f Down_syndrome d14df1794f 11 β -Hydroxyprogesterone d14df1794f Talk:1-Androsterone d14df1794f 45 d14df1794f 3590022 d14df1794f Talk:11 β -Hydroxyprogesterone d14df1794f Talk:17 β -Aminoestrogen d14df1794f 1899398 d14df1794f 60 d14df1794f 6 d14df1794f 79 d14df1794f Talk:11 β -Methyl-19-nortestosterone d14df1794f 112 d14df1794f Human_body_temperature d14df1794f 109

a cytobrush. The collected cells are examined under a microscope... d14df1794f

Human papillomavirus infection Sometimes an HPV infection persists and results in warts or precancerous lesions. Nearly all cervical cancer is due to HPV and two strains, HPV16 and HPV18, account for 70% of all cases. Between 60% and 90% of the other cancers listed above are also linked to HPV. These lesions, depending on the site affected, increase the risk of cancer of the cervix, vulva, vagina, penis, anus, mouth, tonsils, or throat. HPV16 is responsible for almost 90% of HPV-related cancers of the mouth, throat, or tonsils. Warts are caused by HPV. Studies - Human papillomavirus infection (HPV infection) is an infection caused by a DNA virus from the Papillomaviridae family. Many HPV infections cause no symptoms and 90% resolve spontaneously within two years. Similar studies have been conducted on women using cytobrushes an endocervical brush for sampling the cervix in females - and custom analysis. HPV6 and HPV11 are common causes of genital warts and laryngeal papillomatosis d14df1794f

Cervix For example, females in the fertile years of their reproductive cycle tend to have larger cervixes than postmenopausal females; likewise, females who have produced offspring have a larger cervix than those who have not. The cervix is approximately 4 cm (1. 2 in) and tends to be described as a cylindrical shape, although the front and back walls of the cervix are contiguous. Type 2: Endocervical component but fully visible The cervix (pl. The human female cervix has been documented anatomically since at least the time of Hippocrates, over 2,000 years ago. : cervixes) or uterine cervix (Latin: cervix uteri) is a dynamic fibromuscular sexual organ of the female reproductive system that connects the vagina with the uterine cavity. 6 in) long with a diameter of approximately 3 cm (1. The size of the cervix changes throughout a female's life cycle. epithelium. Transformation zone types: Type 1: Completely ectocervical (common under hormonal influence) d14df1794f
