Ourahmane's practise addresses how contemporary issues; geopolitics, migration and the histories of colonialism are registered on the body. Drawing on personal and collective narratives she incorporates video, sound, performance, sculpture and installation on an often large or monumental scale that have consequences beyond the walls of her exhibitions. Ourahmane challenges broader institutional structures through logistics and bureaucratic processes.

Cotton gin The Indian worm-gear roller gin was invented sometime around the 16th century and has, according to Lakwete, remained virtually unchanged today. through the bars of a comb-like grid, pulling the cotton fibers through the grid as they did. The separated seeds may be used to grow more cotton or to produce cottonseed oil. Handheld roller gins had been used in the Indian subcontinent since around 500 A. The comb-like teeth of the grids were closely spaced, preventing A cotton gin—meaning "cotton engine"—is a machine that quickly and easily separates cotton fibers from their seeds, enabling much greater productivity than manual cotton separation. Practitioners of oil pulling claim it is capable of improving oral health. Its promoters claim it works by pulling out toxins, but there is no credible evidence to support this.

Saw Various terms are used to describe toothed and abrasive saws. blade's teeth; the amount of wobble created during cutting; and the amount of material pulled out of the sides of the cut. Although the term "kerf" is often A saw is a tool consisting of a tough blade, wire, or chain with a hard toothed edge used to cut through material

Timing belt (camshaft) A timing belt is a semidurable component: in many cases it lasts for the service life of the engine, and in other cases it must be replaced during the engine's service life, anywhere from once to several times, depending on how the vehicle is used and how long the vehicle is in service. for protection against dust and debris. This synchronisation ensures that the engine's valves open and close at the correct times in relation to the position of the pistons. However a few engines since 2008 have used "wet timing belts", whereby the belt is lubricated by engine oil to In a piston engine, a timing belt (also called a cambelt) is a toothed belt that drives the camshaft and synchronizes its rotation with the crankshaft propelling it

== Early life == A massive response ensued to protect beaches, wetlands and estuaries from the spreading oil utilizing skimmer ships, floating booms, controlled burns and 1,840,000 US gal (7,000 m3) of oil dispersant. Due to the months-long spill, along with adverse effects from the response and cleanup activities, extensive... Oil pulling stems from traditional Ayurvedic medicine, whose practitioners may use sunflower oil, coconut oil, olive oil, or other herbal oils. == History == A modern mechanical cotton gin was created by American inventor Eli Whitney in 1793 and patented in 1794. Whitney's gin used a combination of a wire screen and small wire hooks to pull the cotton through, while brushes continuously removed the loose cotton lint to prevent jams. It made cotton farming more profitable, leading to a boom in cotton production in the United States. Whitney had hoped his invention would reduce the amount of labor needed to process cotton, but it increased the need for laborers to harvest the crop as picking cotton was now the bottleneck in the process. This inadvertently led to an increase in the use of slaves. Cotton harvesting machines did not... Saws began as serrated materials, and when mankind learned how to use iron, it became the preferred material for saw blades of all kinds. There are numerous types of hand saws and mechanical saws, and different types of blades and cuts.

d631b99bac == Description == d631b99bac Usually mouthwashes are antiseptic solutions intended to reduce the microbial load in the mouth, although other mouthwashes might be given for other reasons such as for their analgesic, anti-inflammatory or anti-fungal action. Additionally, some rinses act as saliva substitutes to neutralize acid and keep the mouth moist in xerostomia (dry mouth). Cosmetic mouthrinses temporarily control or reduce bad breath and leave the mouth with a pleasant taste. d631b99bac Bacon began the Head series out of necessity; he was granted the 1949 exhibition at the Hayward a year in advance, but had not painted at all in 1947, and had only a few works he was happy with from 1948. Over time, the series became something quite apart from his initial idea; Head VI turned into the first of his many examinations of Velázquez's c. 1650 Portrait of Innocent X. d631b99bac Lydia Ourahmane was born in Saïda, Algeria, in 1992. Her mother is Malaysian of Chinese descent and her father is Algerian. She grew up in a Christian commune in Arzew, Oran during the Algerian Civil War (1991-2002). d631b99bac

Oil pulling It originates from Ayurvedic medicine. Practitioners of oil pulling claim it is capable of improving oral health. Its promoters claim it works by pulling out toxins, but there is no credible evidence Oil pulling is an alternative medical practice in which an edible oil is swished around the mouth for a period of time and then spat out, similar to mouthwash d631b99bac

Her work was included in the 60th Venice Biennale, 15th Gwangju Biennale, 15th Istanbul Biennial (2017), 34th Bienal de São Paulo (2021), New Museum Triennial and Manifesta 12, Palermo (2018). d631b99bac Like the others in the series, it shows a screaming figure alone in a room, and focuses on the open mouth. The work shows a skull which has disintegrated on itself and is largely a formless blob of flesh. The entire upper half has disappeared, leaving only the jaw, mouth and teeth and one ear still intact. It is the first of Bacon's paintings to feature gold background railings or bars; later to become a prominent feature of his 1950s work, especially in the papal portraits where they... d631b99bac

Sketches by Leonardo da Vinci in the 16th century show a chain with a roller bearing. In 1800, James Fussell patented a roller chain on development of his balance lock and in 1880 Hans Renold patented a bush roller chain. d631b99bac The most common devices to transfer the drive are toothed rubber belts, metal timing chains or a set... d631b99bac

Roller chain (This effect is made worse by a chain improperly tensioned, but is unavoidable no matter what care is taken). It is a simple, reliable, and efficient means of power transmission. It is driven by a toothed wheel called a sprocket. The worn teeth (and chain) Roller chain or bush roller chain is the type of chain drive most commonly used for transmission of mechanical power on many kinds of domestic, industrial and agricultural machinery, including conveyors, wire- and tube-drawing machines, printing presses, cars, motorcycles, and bicycles. It consists of a series of short cylindrical rollers held together by side links. face of the teeth d631b99bac

Hydrogen peroxide (H₂O₂) is the active ingredient most commonly used in whitening products and is delivered as either hydrogen peroxide or carbamide peroxide. Hydrogen peroxide is analogous to carbamide peroxide as it is released when the stable complex is in contact with water. When it diffuses into the tooth, hydrogen peroxide acts as an oxidising agent that breaks down to produce unstable free radicals. In the spaces between the inorganic salts in tooth enamel, these unstable free radicals attach to organic pigment molecules resulting in small, less heavily pigmented components.

Reflecting less light, these smaller molecules create a "whitening effect". Peroxyacids are an alternative to hydrogen peroxide and also contribute to the breakdown of pigment molecules. There are different products available on the market to remove stains...

A saw is a tool consisting of a tough blade, wire, or chain with a hard toothed edge. It is used to cut through material, very often wood, though sometimes metal or stone.

Deepwater Horizon oil spill It is considered the largest marine oil spill in the history of the petroleum industry and estimated to be 8 to 31 percent larger in volume than the previous largest, the Ixtoc I oil spill, also in the Gulf of Mexico. Caused in the aftermath of a blowout and explosion on the Deepwater Horizon oil platform, the United States federal government estimated the total discharge at 4. Reports in early 2012 indicated that the well site was still leaking. define what a plume is here... The Deepwater Horizon oil spill is regarded as one of the largest environmental disasters in world history. In June, BP launched a PR campaign and successfully bid for several The Deepwater Horizon oil spill was an environmental disaster beginning 20 April 2010 off the coast of the United States in the Gulf of Mexico, on the BP-operated Macondo Prospect. After several failed efforts to contain the flow, the well was declared sealed on 19 September 2010

Design Many modern engines have timing belts; others instead have either a timing chain (which is a roller chain with the same purpose) or a set of timing gears that mesh with one another.

Tooth whitening tooth bleaching is the process of lightening the colour of human teeth. The chemical degradation of the chromogens within or on the tooth is termed as bleaching. Whitening is often desirable when teeth become yellowed over time for a number of reasons, and can be achieved by changing the intrinsic or extrinsic colour of the tooth enamel

Rinsing with water or mouthwash after brushing with a fluoride toothpaste can reduce the availability of salivary fluoride. This can lower the anti-cavity re-mineralization and antibacterial effects of fluoride. Fluoridated mouthwash may mitigate this effect or in high concentrations increase available fluoride, but is not as cost-effective as leaving the fluoride toothpaste on the teeth after brushing. A group of experts discussing post brushing rinsing...

In most piston engines, the camshaft(s) are mechanically connected to the crankshaft. The crankshaft drives the camshaft (via a timing belt, timing chain or gears), which in turn actuates the intake and exhaust valves. These valves allow the engine to inhale air (or an air/fuel mixture) and exhale the exhaust gasses.
