Levonorgestrel addition to the single-dose emergency contraceptive, Cipla and later Piramal marketed i-pill Daily, a 21-tablet combined daily oral contraceptive intended for Levonorgestrel is a hormonal medication used in a number of birth control methods. The dosage used for emergency contraception is ineffective when ovulation has already occurred, and has been found to have no effect on implantation. It is combined with an estrogen to make combination birth control pills. In an intrauterine device (IUD), such as Mirena among others, it is effective for the long-term prevention of pregnancy. It decreases the chances of pregnancy by 57-93%. Levonorgestrel works by preventing or delaying ovulation so an egg cannot be released. As an emergency birth control, sold under the brand names Plan B One-Step and Julie, among others, it is useful within 72 hours of unprotected sex. A levonorgestrel-releasing implant is also available in some countries. The more time that has passed since sex, the less effective the medication becomes 66c5071fd9
