Rook (piercing) It is located just above the tragus on the ridge between the inner and outer conch with the piercing passing from the underside to the top of this ridge, differing from many ear piercings that essentially span between a "front" and "back" surface. The piercing was first named in issue #4 of the magazine Body Play and Modern Primitives Quarterly (published by Fakir Musafar) around 1992 alongside the first printed reference to the industrial piercing, then termed "industrial ear project". The rook piercing is also cared for much like any other ear cartilage piercing. Erik Dakota, a well known professional piercer and the individual responsible for originating and popularizing the rook piercing, is said to have named this modification after a shortened version of his first name. Use an sterile saline A rook piercing is a perforation of the antihelix of the ear for the

purpose of wearing jewelry. one person may be a slight tickle to someone else

Cartilage piercing " The cartilage ear piercing is known to be more sore than the lobe as in the cartilage there is less blood, so it takes longer to heal (typically anywhere from 4-12 months). A cartilage piercing can refer to any area of cartilage on the body with a perforation created for the purpose of wearing jewelry. Outside of the body modification community, many people commonly refer to a helix piercing as a "cartilage piercing. The two most common areas with cartilage piercings are the ear and the nose. The two most common A cartilage piercing can refer to any area of cartilage on the body with a perforation created for the purpose of wearing jewelry 25cc83a6ea

The procedure is done similarly to other piercings of the cartilage of the ear. Clamps may be used but it is usually done freehand. Once the area is cleaned, the piercer and the client will agree on placement, although because of its location it can be difficult to see exactly where the entrance and exit holes will be. Generally, the piercer will advise the client on the best location... 25cc83a6ea

Nose piercing Among the different varieties of nose piercings, the nostril piercing is the most common. Nose piercing is the piercing of the skin or cartilage which forms any part of the nose, normally for the purpose of wearing jewelry, called a nose-jewel Nose piercing is the piercing of the skin or cartilage which forms any part of the nose, normally for the purpose of wearing jewelry, called a nose-jewel 25cc83a6ea

Body piercing Body piercing is a form of body modification involving the puncturing or cutting a part of the body to create an opening through which jewelry or implants 25cc83a6ea

Earring "ear piercing" usually refers to an earlobe piercing, whereas piercings in the upper part of the external ear are often referred to as "cartilage piercings" 25cc83a6ea

Stretching (body piercing) Dermal punching is generally. degree, cartilage piercings are usually more difficult to stretch and more likely to form hypertrophic scars if stretched quickly 25cc83a6ea

Industrial piercing: Two piercings joined by a single piece of jewelry, usually a barbell, commonly with one piercing in the helix and the other in the forward helix, though other multiple-piercing placements may still be termed industrials. 25cc83a6ea
