2 degree climate target 6 degrees Fahrenheit) compared to pre-industrialization levels (1850–1900). The time at which global mean temperature is predicted to reach +2 °C compared to the pre-industrial period (1850–1900) is termed the "crossing year". This objective is a political determination based on scientific knowledge concerning the probable consequences of global warming, which dates from the Copenhagen Conference in 2009. Physical climate risk scenarios, which often project to the end of the century, 2100, use the 2 °C target as a reference point. 6 degrees Fahrenheit) compared The two degree target is the international climate policy goal of limiting global warming to less than two degrees Celsius (3. Acerra is one of the most ancient cities of the region, likely founded by the Osci with the name of Akeru (Latin: Acerrae, Ancient Greek: Ἀχέρραι). It first appears in history as an independent city during the great war of the Campanians and Latins against Rome. Shortly after the conclusion, in 332 BC, the Acerrani, in common with several other Campanian cities, obtained the Roman "civitas", without the right of suffrage. The period at which the latter privilege was granted upon them is not mentioned, however, it is certain that they ultimately obtained full rights over the Roman citizens. fe0fe68a64 == History == fe0fe68a64

Celsius The unit was called centigrade in several languages (from the Latin centum, which means 100, and gradus, which means steps) for many years. Most countries use this scale, with the exception of the United States, some island territories, and Liberia, where the Fahrenheit scale is still used. In 1948, the International Committee for Weights and Measures renamed it to honor Celsius and also to remove confusion with the term for one hundredth of a gradian in some languages. It is named after the Swedish astronomer Anders Celsius (1701–1744), who proposed the first version of it in 1742. The degree Celsius (symbol: °C) can refer to a specific point on the Celsius temperature scale or to a difference or range between two temperatures. The degree Celsius is the unit of temperature on the Celsius temperature scale (originally known as the centigrade scale in English), one of two temperature The degree Celsius is the unit of temperature on the Celsius temperature scale (originally known as the centigrade scale in English), one of two temperature scales used in the International System of Units (SI), the other being the closely related Kelvin scale

While units of heat are often supplanted by energy units in scientific work, they are still used in some fields. For example, in the United States the price of natural gas is quoted in dollars per the amount of natural gas that would give 1 million Btu (1 "MMBtu") of heat energy if burned. == The 1st Battalion Mizoram Armed Police ==

Daniel Gabriel Fahrenheit The popularity of his thermometers also led to the widespread adoption of his Fahrenheit scale, with which they were provided. broadcast in Fahrenheit. He was born in Poland to a family of German origin, although he spent much of his life in the Dutch Republic. Fahrenheit is also credited with producing the first successful mercury-in-glass thermometers, which were more accurate than the spirit-filled thermometers of his time and of a generally superior design. Related measurements include the cooling degree day (CDD), which quantifies energy demand for air conditioning. fe0fe68a64 Heating degree days are defined relative to a base temperature—the outside temperature above which a building needs no heating. Base temperatures may be defined for a particular building as a function of the temperature that the building is heated to, or it may be defined for a country or region for example. In the latter case, building standards or conventions may exist for the temperature threshold. These include: fe0fe68a64 It is applied both to beef and to game. fe0fe68a64

Before Nigeria gained independence, the local government that is today known as Efon Local Government saw a number of transformations. This is demonstrated by the fact that Efon Alaaye served as the administrative center for the previous Ekiti West District Council, which was established in 1955. After 18 years, the District headquarters was shifted to Ijero, Ekiti, in 1973 for what could only be described as administrative convenience.

On December... As a global target for limiting emissions, the 2 °C target has frequently been criticized for being higher than desirable, because two degrees of warming will have serious consequences for humans and the environment. The IPCC Special Report on Global Warming of 1.5 °C (2018) included detailed analysis of the probable differences in impact of "limiting global warming to 1.5 °C compared with 2 °C", warning that a 2 °C temperature increase would worsen impacts that include extreme...

A Btu was originally defined as the amount of heat required to raise the temperature of one pound of

liquid water by one degree Fahrenheit at a constant pressure of one atmospheric unit. There are several different definitions of the Btu that differ slightly. This reflects the fact that the temperature change of a mass of water due to the addition of a specific amount of heat (calculated in energy units, usually joules) depends slightly upon the water's...
