

Why Do I Have Fishy Odor

The portmanteau word "pheromone" was coined by Peter Karlson and Martin Lüscher in 1959, based on the Greek φέρω phérō ('I carry') and ὁρμῶν hórmōn ('stimulating'). Pheromones are also sometimes classified as ecto-hormones ("ecto-" meaning "outside"). They were researched earlier by various scientists, including Jean-Henri Fabre, Joseph A. Lintner, Adolf Butenandt, and ethologist Karl von Frisch who called them various names, such as "alarm substances". These chemical messengers are transported... d2b87fe468

Pheromone The ecological functions and evolution of pheromones are a major topic of research in the field of chemical ecology. Their use among insects has been particularly well documented. trimethylamine, which is known to act as an hTAAR5 agonist and to possess a foul, fishy odor that is aversive to humans; however, hTAAR5 is not the only olfactory A pheromone (from Ancient Greek φέρω (phérō) 'to bear' and hormone) is a chemical that is secreted or excreted by an organism, which triggers a social response in members of the same species. In addition, some vertebrates, plants and ciliates communicate by using pheromones. Pheromones are used by many organisms, from basic unicellular prokaryotes to complex multicellular eukaryotes. There are alarm pheromones, food trail pheromones, sex pheromones, and many others that affect behavior or physiology d2b87fe468

The Goon Mudds. Leader of a vicious gang of fish-men that patrol the city's harbor. The series mixes both a comical tone with scenes of violence, which pit the titular character against conventional crime villains such as mobsters and gang leaders, as well as creatures from horror and science fiction, including zombies, ghosts, ghouls, mutants, giant squids, extra-dimensional aliens, mad scientists, and robots. Fishy Pete has a special hatred for the Goon, the man responsible for his dual The Goon is a supernatural crime comic book series written and drawn by Eric Powell d2b87fe468

Pu'er tea Badly fermented maocha will create a muddy tea with fishy and sour flavors indicative of inferior aged pu'er. Aged raw pu'er, a tea Pu'er or pu-erh is a variety of fermented tea traditionally produced in Yunnan Province, China. It differs from Yunnan tea (dianhong) in that pu'er tea goes through a complex fermentation process. In the context of traditional Chinese tea production terminology, fermentation refers to microbial fermentation (called 'wet piling'), and is typically applied after the tea leaves have been sufficiently dried and rolled. As the tea undergoes controlled microbial fermentation, it also continues to oxidize, which is also controlled, until the desired flavors are reached. This process produces tea known as Chinese: 普洱; pinyin: hēichá; lit. assamica, which is a specific variety of tea plant that is native to Yunnan. Pu-erh tea is made from the leaves of the Yunnan tea plant *Camellia sinensis* var. 60 days on average. 'black tea', though the term is commonly translated to English as "dark tea" to distinguish it from the English-language "black tea" (正山, 正山; hóngchá; 'red tea'), which it is not d2b87fe468

Disgust Bonobos are most sensitive to fecal odors and rotten food odors. Musically sensitive people may even be disgusted by the cacophony of inharmonious sounds. In *The Expression of the Emotions in Man and Animals*, Charles Darwin wrote that disgust is a sensation that refers to something revolting. Disgust is experienced primarily in relation to the sense of taste (either perceived or imagined), and secondarily to anything which causes a similar feeling by sense of smell, touch, or vision. contaminants when there is no accompanying odor. Research has continually proven a relationship between disgust and anxiety disorders such as arachnophobia, blood-injection-injury type phobias, and contamination fear related obsessive-compulsive disorder (also known as OCD). Overall, primates incorporate various senses Disgust (Middle French: desgouster, from Latin gustus, 'taste') is an emotional response of rejection or revulsion to something potentially contagious or something considered offensive, distasteful or unpleasant d2b87fe468

Fish derive many benefits from shoaling behaviour including defence against predators (through better predator detection and by diluting the chance of individual capture), enhanced foraging success, and higher success in finding a mate. d2b87fe468 == History == d2b87fe468 In 1895, he was charged with embezzlement stemming from an audit of the bank. Before the trial, he fled to Honduras, where he began writing *Cabbages and Kings*, in which he coined... d2b87fe468 Trout, which are sister species of salmon, also perform similar migrations, although they mostly move potamodromously... d2b87fe468 Born in Greensboro, North Carolina, Porter worked at his uncle's pharmacy after finishing school and became a licensed pharmacist at age 19. In March 1882, he moved to Texas, where he initially lived on a ranch, and later settled in Austin, where he met his first wife, Athol Estes. While working as a drafter for the Texas General Land Office, Porter began developing characters for his short stories. He later worked for the First National Bank of Austin, while also publishing a weekly periodical, *The Rolling Stone*. d2b87fe468 Seafood is an important source of (animal) protein in many diets around the world, especially in coastal areas.

Semi-vegetarians who consume seafood as the only source of meat are said to adhere to pescetarianism. The harvesting of wild seafood is usually known as fishing or hunting, while the cultivation and farming of seafood is known as aquaculture and fish farming (in the case of fish). Most of the seafood harvest is consumed by humans, but a significant proportion is used as fish food to farm other fish or rear farm animals. Some seafoods (i...

Seafood g. Historically, marine mammals such as cetaceans (whales and dolphins) as well as seals have been eaten as food, though that happens to a lesser extent in modern times. shrimp, crabs, and lobster), and echinoderms (e. , bivalve molluscs such as clams, oysters, and mussels, and cephalopods such as octopus and squid), crustaceans (e. Edible sea plants such as some seaweeds and microalgae are widely eaten as sea vegetables around the world, especially in Asia. g. sea cucumbers and sea urchins). Bromophenols, which are produced by marine algae, give marine animals an odor and taste that is absent Seafood is any form of sea life regarded as food by humans, prominently including fish and shellfish. g. Shellfish include various species of molluscs (e. marine invertebrate species have been identified

Salmon are anadromous, spending their juvenile life in rivers or lakes, and then migrating out to sea where they spend adult lives and gain most of their body mass. When they reach sexual maturity, the adults return to the upstream rivers to reproduce. Usually they return with uncanny precision to the natal river where they were born, and even to the very spawning ground of their birth. It is thought that, when they are in the ocean, they use magnetoreception to locate the general position of their natal river, and once close to the river, that they use their sense of smell to home in on the river entrance and even their natal spawning ground. Fish benefit from schooling through increased hydrodynamic efficiency, meaning they move faster and expend less energy.

Eggs as food rapeseed (canola) or soy meals, its intestinal microbes metabolize them into fishy-smelling triethylamine, which ends up in the egg. People may also eat the eggs of reptiles, amphibians, and fish. Eggs of other birds, such as ducks and ostriches, are eaten regularly but much less commonly than those of chickens. The unpredictable diet Humans and other hominids have consumed eggs for millions of years. Fish eggs consumed as food are known as roe or caviar. The most widely consumed eggs are those of fowl, especially chickens. People in Southeast Asia began harvesting chicken eggs for food around 1500 BCE

Phenethylamine To a lesser extent, it also acts as a neurotransmitter in the human central nervous system. Its density is 0. In the brain, phenethylamine regulates monoamine neurotransmission by binding to trace amine-associated receptor 1 (TAAR1) and inhibiting vesicular monoamine transporter 2 (VMAT2) in monoamine neurons. 964 g/ml Phenethylamine (PEA) is an organic compound, natural monoamine alkaloid, and trace amine, which acts as a central nervous system stimulant in humans. It is a colourless liquid at room temperature that has a fishy odor, and is soluble in water, ethanol and ether. In addition to its presence in mammals, phenethylamine is found in many other organisms and foods, such as chocolate, especially after microbial fermentation. ethyl group. In mammals, phenethylamine is produced from the amino acid L-phenylalanine by the enzyme aromatic L-amino acid decarboxylase via enzymatic decarboxylation

Hens and other egg-laying creatures are raised throughout the world, and mass production of chicken eggs is a global industry. In 2009, an estimated 62.1 million metric tons of eggs were produced worldwide from a total laying flock of approximately 6.4 billion hens. There are issues of regional variation in demand and expectation, as well as current debates concerning methods of mass production. In 2012, the European Union banned battery husbandry of chickens. == Background ==

O. Henry Henry, was an American writer known primarily for his short stories, though he also wrote poetry and non-fiction. His works include "The Gift of the Magi", "The Caballero's Way", "The Duplicity of Hargraves", and "The Ransom of Red Chief", as well as the novel Cabbages and Kings. "Diamonds" (1894) "A Blow All 'Round" (1895) "A Chicago Proposal" (1895) "A Fishy Story" (1895) "A Foretaste" (1895) "A Literal Caution" (1895) "A Philadelphia William Sydney Porter (born William Sidney Porter; September 11, 1862 – June 5, 1910), better known by his pen name O. Porter's stories are known for their naturalist observations, witty narration, and surprise endings

== Overview == Fish use many traits to choose shoalmates. Generally they prefer larger shoals, shoalmates of their own species, shoalmates similar in size and appearance to themselves, healthy fish, and kin (when recognized). The oddity effect posits that any shoal member that stands out in appearance will be preferentially targeted by predators, thus homogenising shoals. Disgust is one of the basic emotions of Robert Plutchik's theory of emotions, and has been studied extensively by Paul Rozin. It invokes a characteristic facial expression, one of Paul Ekman's six universal facial expressions of emotion. Unlike the emotions of fear, anger, and sadness, disgust is associated with a decrease in heart rate...

Salmon run x. 01306. After spawning, most Atlantic salmon and all species of Pacific salmon die, and the salmon life cycle starts over again with the new generation of hatchlings. "Something

smells fishy: predator-naive salmon use diet cues, not kairomones, to recognize a sympatric A salmon run is an annual fish migration event where many salmonid species, which are typically hatched in fresh water and live most of their adult life downstream in the ocean, swim back against the stream to the upper reaches of rivers to spawn on the gravel beds of small creeks. 1095-8312. Roberts LJ, de Leaniz CG (2011). 2009 d2b87fe468

Phenethylamine is sold as a dietary supplement for purported mood and weight loss-related therapeutic benefits; however, in orally ingested phenethylamine, a significant amount is metabolized in the small intestine by monoamine oxidase B (MAO-B) and then aldehyde dehydrogenase (ALDH), which converts it to phenylacetic acid. This means that for significant concentrations to reach the brain, the dosage must be higher than for other methods... d2b87fe468 Most teas, although described as fermented, are actually oxidised by enzymes present in the tea plant. Pu'er is instead fermented microbially by molds, bacteria and yeasts present on the harvested leaves of the tea plant, and... d2b87fe468

Shoaling and schooling About one quarter of fish species shoal all their lives, and about one half shoal for part of their lives. Environmental Biology of Fishes. Bibcode:1998EnvBF In biology, any group of fish that stay together for social reasons are shoaling, and if the group is swimming in the same direction in a coordinated manner, they are schooling. "Bioeconomics of schooling fishes: selfish fish, quasi-free riders, and other fishy tales". In common usage, the terms are sometimes used rather loosely. 53 (4): 353–364 d2b87fe468

An early prototype of The Goon was first published in 1995, in a book called Best Cellars #1 from Out of the Cellar Comics. This prototype was called Monster Boy, and the story was written and illustrated by Eric Powell. d2b87fe468 The Goon first appeared in a cameo in a one-page preview in Avatar Illustrated (June 1998) by Avatar Press. Powell was unhappy with the quality of the book, so after three issues, he ceased producing new material and waited for his contract to expire. After this, he was unable to find another publisher, so he moved into self-publishing in 2002 with Albatross Exploding Funny Books. These self-published issues caught the eye of Dark Horse Comics, which approached Powell by telling him that did not know why they had passed on the book... d2b87fe468
