The design of the Western saddle derives from the saddles of the Mexican vaqueros—the early horse trainers and cattle handlers of Mexico and the American Southwest. It was developed for the purpose of working cattle across vast areas, and came from a combination of the saddles used in the two main styles of horseback riding then practiced in Spain—la jineta, the Moorish style which allowed great freedom of movement to the horse; and la estradiota (later known as la brida), a jousting style, which provided great security to the rider and strong control of the horse. A very functional item was also added: the saddle "horn". This style of saddle allowed vaqueros to control cattle by use of a rope around the neck of the animal, tied or dallied (wrapped without a knot...)
