TypeScript, which extends JavaScript with type annotations and additional features, has the same syntax as well as its own additional features. The JavaScript standard library lacks an official standard text output function (with the exception of document.write). Given that JavaScript is mainly used for client-side scripting within modern web browsers, and that almost all web browsers provide the alert function, alert can also be used, but it is not commonly used. In Hibernate and other persistence systems, transient describes an object that has been instantiated, but is not associated with a Hibernate session, i. e. the object resides in memory but is not being persisted. Because ChatScript is designed for interactive conversation, it automatically maintains user state across volleys. A volley is any number of sentences the user inputs at once and the chatbots response.

However, there are some definite differences between the languages

== Basics == The Java "Hello, World!" program is as follows: ABAP was advertised as fourth-generation programming language (4GL). It was originally the report language for SAP R/2, a platform that enabled large corporations to build mainframe business applications for materials management and financial and management accounting. The language provides robust error handling through exceptions, and includes a debugger in the standard library for efficient problem-solving. Python's syntax, designed for readability and ease of use, makes it a popular choice among beginners and professionals... **== Background ==** The Java platform has various ad-hoc annotation mechanisms—for example, the transient modifier, or the @Deprecated javadoc tag. The Java Specification Request JSR-175

introduced the general-purpose annotation (also known as metadata) facility to the Java Community Process in 2002; it gained approval in September 2004. c2e20aac6f

Constexpr While in C this is limited only to objects, constexpr may be used on objects, functions, or structured bindings in C++. Unlike the usual const, which specifies read-only access, constexpr is a stronger form that implies const (in most contexts). constexpr is a specifier keyword in the C and C++ programming languages which, roughly speaking, specifies that something may be evaluated at compile time constexpr is a specifier keyword in the C and C++ programming languages which, roughly speaking, specifies that something may be evaluated at compile time c2e20aac6f

C (programming language) It has been and continues to be used to implement operating systems (especially kernels), device drivers, and protocol stacks, though its use in application software is decreasing. The language has a relatively small number of keywords, and user-defined identifiers C is a general-purpose programming language created in 1972 by Dennis Ritchie. C is used on computers ranging from supercomputers to microcontrollers and embedded systems. executable code is contained in functions rather than top-level statements. By design, C gives programmers relatively direct access to the features of typical CPU architectures, customized for the target instruction set c2e20aac6f

The ABAP language was originally used by developers to develop the SAP R/3 platform. It was also intended to be used by SAP customers to enhance SAP applications. Customers can develop custom reports and interfaces with ABAP programming. The language was geared towards more technical customers with programming experience. The Java syntax has been gradually extended in the course of numerous major JDK releases, and now supports abilities such as generic programming and anonymous functions (function literals, called lambda expressions in Java). Since 2017, a new JDK version is released twice a year. == Reserved keywords == Annotations became available in the language itself beginning with version 1.5 of the Java Development Kit (JDK). The apt tool provided a provisional interface for compile-time annotation processing in JDK version 1.5; JSR-269 formalized this, and it became integrated into...

Global variables can be declared as transient or permanent ChatScript is a combination Natural Language engine and dialog management system designed initially for creating chatbots, but is currently also used for various forms of NL processing. It is written in C++. Variables purely local to a topic or function are transient. variables come in several kinds

Transient (computer programming) When a field is declared transient, it would not be serialized even In computer programming, transient is a property of any element in the system that is temporary. The term applies to transient applications, i. In the Java programming language, transient is a keyword used as a field modifier. e. software for the end-user which is displayed with a transient application posture; transient data, which is discarded after it is no longer needed by the computation; and transient code which are subroutines or software components that are loaded in the system only for a fraction of the total run time c2e20aac6f

In general ChatScript aims to author extremely concisely, since the limiting scalability of hand-authored chatbots is how much/fast one can write the script. c2e20aac6f

Java annotation This allows annotations to be retained by the Java virtual machine at run-time and read via reflection. The Java platform has various ad-hoc annotation mechanisms—for example, the transient modifier, or the @Deprecated javadoc tag. Classes, methods, variables, parameters and Java packages may be annotated. The Java Specification In the Java computer programming language, an annotation is a form of syntactic metadata that can be added to Java source code, like an attribute. It is possible to create meta-annotations out of the existing ones in Java. ones in Java. Unlike Javadoc tags, Java annotations can also

be embedded in and read from Java class files generated by the Java compiler. Like Javadoc tags, Java annotations can be read from source files

ABAP was originally an acronym for Allgemeiner Berichts-Aufbereitungs-Prozessor ("generic report preparation processor" in German), but was rebranded as Advanced Business Application Programming in 1996. The word `constexpr` is a portmanteau of constant expression, first introduced in C++11. Prior to the introduction of `constexpr`, options for specifying compile-time constants and functions in C++ were limited to preprocessor macros (such as `#define PI 3.1415926535` or procedural macros like `#define SQUARE(x) ((x) * (x))`), which performed textual substitution and thus lacked the type safety of a core language feature, or declaring an enumerated constant (such as `enum { WINDOW_SIZE = 600 };`), which... ABAP remains as the language for creating programs for the client...

List of Java keywords Because of this, programmers cannot use keywords in some contexts, such as names for variables, methods, classes, or as any other identifier. In the Java programming language, a keyword is any one of 68 reserved words that have a predefined meaning in the language. Of these 68 keywords, 17 of them are only contextually reserved, and can sometimes be used as an identifier, unlike standard reserved words. Due to their special functions in the language, most integrated development environments for Java use syntax highlighting

to display keywords in a different colour for easy identification. Because of this, programmers In the Java programming language, a keyword is any one of 68 reserved words that have a predefined meaning in the language c2e20aac6f

Additional keywords in the C++ family of "const" keywords include consteval, used for guaranteeing a function executes at compile time and compile time only, and constexpr, used for guaranteeing static/thread storage duration, ensuring compile-time initialization (but not immutability). c2e20aac6f In the Java programming language, transient is a keyword used as a field modifier. When a field is declared transient, it would not be serialized even if the class to which it belongs is serialized. In Java, methods, classes and interfaces cannot be declared as transient, because they are never serialized. c2e20aac6f The basic element of scripting is the rule. A rule consists of a type, a label (optional), a pattern, and an output. There are three types of rules. Gambits are something a chatbot might say when it has control of the conversation. Rejoinders are rules that respond to a user remark tied to what the chatbot just said. Responders are rules that respond to arbitrary user input... c2e20aac6f ChatScript was written by Bruce Wilcox and originally released in 2011, after Suzette (written in ChatScript) won the 2010 Loebner Prize, fooling one of four human judges. c2e20aac6f The syntax is mostly derived from C and C++. Unlike C++, Java has no global functions or variables, but has data members which are also regarded as global

variables. All code belongs to classes and all values are objects. The only exception is the primitive data types, which are not considered to be objects for performance reasons (though can be automatically converted to objects and vice versa via autoboxing). Some features like operator overloading or unsigned integer data types are omitted to simplify the language and avoid possible programming mistakes. C was initially developed as a successor to the B programming language at Bell Labs by Ritchie between 1972 and 1973. Its initial purpose was to construct utilities running on Unix, and was later applied to re-implementing the kernel of the Unix operating system. During the 1980s, C gradually gained popularity, leading to it becoming one of the most widely used programming languages, with C compilers available for practically all modern computer architectures and operating systems. The book *The C Programming Language*, co-authored by the original language designer, served for many years as the de facto standard for the language. C has been standardized since 1989 by the American National Standards... Examples of applications of the term are described below. The examples below make use of the `console.log()` function present in most browsers for standard text output.
