Conversion of scales of temperature and different formulae must be used. To convert a change in temperature from degrees Celsius to degrees Fahrenheit, the formula is $\{\Delta T\}^{\circ}\text{F} = 9/5\{\Delta T\}^{\circ}\text{C}$ This is a collection of temperature conversion formulas and comparisons among eight different temperature scales, several of which have long been obsolete 947c908914

Between 1954 The degree Celsius is the unit of temperature on the Celsius temperature scale (originally known as the centigrade scale in English), one of two temperature scales used in the International System of Units (SI), the other being the closely related Kelvin scale. The unit was called centigrade in several languages (from the Latin centum, which means 100, and gradus, which means steps) for many years. In 1948, the International Committee for Weights and Measures renamed it to honor Celsius and also to remove confusion with the term for one hundredth of a gradian in some languages. (In Celsius's initial proposal, the values were reversed: the boiling point was 0 degrees and the freezing point was 100 degrees. It is named after the Swedish astronomer Anders Celsius (1701–1744), who proposed the first version of it in 1742. Most countries use this scale, with the exception of the United States, some island territories, and Liberia, where the Fahrenheit scale is still used 947c908914
