De Vrouwbuurstermolen 9526. De Vrouwbuurstermolen is what the Dutch describe as De Vrouwbuurstermolen is a smock mill in Vrouwenparochie, Friesland, Netherlands which was built in 1862 and is in working order. The mill is listed as a Rijksmonument. mill fitted with a sprinkler system in case of fire. The mill is listed as a Rijksmonument, No c93a979dbb

Center... c93a979dbb

Irrigation systems have drops hanging from a U-shaped pipe attached at the top of the pipe with sprinkler heads that are positioned a few feet (at most) above the Irrigation in agriculture is the practice of applying controlled amounts of water to land to help grow crops, landscape plants, and lawns. In addition to these uses, irrigation is also employed to protect crops from frost, suppress weed growth in grain fields, and prevent soil consolidation. Drainage, which involves the removal of surface and sub-surface water from a given location, is often studied in conjunction with irrigation. Irrigation and drainage improvements are not necessarily mutually exclusive. Often both may be required together to assure sustained high-level production of crops. It is also used to cool livestock, reduce dust, dispose of sewage, and support mining operations. For a discussion of the role of drainage practices in agriculture. Irrigation helps to grow crops, maintain landscapes, and revegetate disturbed soils in dry areas and during times of below-average rainfall. Irrigation has been a key aspect of agriculture for over 5,000 years and has been developed by many cultures worldwide c93a979dbb

Center-pivot irrigation systems are beneficial due to their ability to efficiently use water and optimize a farm's yield. The systems are highly effective on large land fields. c93a979dbb == A == c93a979dbb

Impact sprinkler The arm, which is weighted for An impact sprinkler (sometimes called an impulse sprinkler) is a type of irrigation sprinkler in which a rotatable nozzle emits a stream of water for irrigation and that stream drives a rotating mass away from the stream and against a spring, with that mass then returning to impact nozzle mechanism, rotating it slightly each time. Invented in 1933 by Orton Englehart, it quickly found widespread use. The force of the outgoing water flings the sprinkler arm in a circular motion. Though it has in many situations been replaced by gear-driven rotor

heads, many varieties of impact sprinkler remain in use. head can pivot on a bearing above the base c93a979dbb

Micro-irrigation irrigation method with lower water pressure and flow than a traditional sprinkler system. It is also used in horticulture in wholesale nurseries, in landscaping for civic, commercial, and private landscapes and gardens, and in the science and practice of restoration ecology and environmental remediation. Low-volume irrigation is used in agriculture for row crops, orchards, and vineyards. Low-volume irrigation is used in agriculture for row crops, orchards Micro-irrigation, also called Micro-spray, localized, low-volume, low-flow, or trickle irrigation, is an irrigation method with lower water pressure and flow than a traditional sprinkler system. The lower volume allows the water to be absorbed into slow-percolation soils such as clay, minimizing runoff c93a979dbb

== Types of standpipe systems == c93a979dbb == Types == c93a979dbb Little is known of the early history of the mill. A mill stood here in 1570. It was almost certainly a post mill. A rye mill was marked on a map dated 1832. This was a smock mill. De Vrouwbuurstermolen was built on the base of this mill in 1862. The mill was owned by Johannes Jans van der Ley in 1869. The mill was then a corn and pearl barley mill. The mill worked until 1954. At that time, it was fitted with a secondhand pair of sails with leading edges on the Dekker system. These sails were shorter than the other pair, having been acquired secondhand from a demolished drainage mill. They had a span of less than 19.00 metres (62 ft 4 in). In 1962, a society was formed to restore the mill. Restoration took place from 1963 to 1967. The mill has worked regularly since then. A further restoration in 2007 saw the mill fitted with a sprinkler system in case of fire. The mill is listed as a Rijksmonument, No. 9526. c93a979dbb The original horizontal action impact drive sprinkler was invented in 1933 and patented in 1935 by Glendora, California c93a979dbb On March 23, 1914 James A. Norton of Odebolt, Iowa, filed the patent for the center-pivot irrigation system. On August 17, 1915, it was granted as patent #1150144. The patent drawings shows multiple pairs of wheels supporting a pipe that is moved in a circle around a central pivot point. The description is: Watering arrangements making use of movable installations on wheels or the like movable around a pivot center. c93a979dbb == System components == c93a979dbb

Irrigation sprinkler The water is distributed through a network that may consist of pumps, valves, pipes, and sprinklers. Sprinkler irrigation is the method of applying water in a controlled manner that mimics rainfall. Many irrigation sprinklers are buried in the ground along with their supporting plumbing, although above-ground and moving sprinklers are also common An irrigation sprinkler (also known as a water sprinkler or simply a sprinkler) is a device used to irrigate (water) agricultural crops, lawns, landscapes, golf courses, and other areas. They are also used for cooling and for the control of airborne dust c93a979dbb

The design was released in 1973 by Thomas F. Marshall who at the time worked for the Tulsa Oklahoma firm of Kelley-Marshall & Associates. In 1974 Marshall formed his own firm of Thomas F. Marshall Associates. Associate architect was Schoenberger, Straub, Florence & Associates of Phoenix. Varney, Sexton, Sydnor Associates were consulting architects on the project. Ground was broken in 1974 and the tower was constructed by the M. M. Sundt Construction Company of Phoenix. In 1975 when the building was about half complete the Del E. Webb Realty & Management Company a subsidiary of the Del E. Webb Corporation was named the leasing and property manager. The Webb firm also served as project manager to Sundt for the last year of construction. When it was built, it served as the headquarters for Arizona Bancwest, parent company of The Arizona Bank, which moved from a building at Monroe Street and First Avenue. After Arizona passed legislation allowing for interstate banking), The Arizona Bank was acquired... c93a979dbb == History == c93a979dbb == History == c93a979dbb Several irrigation methods differ in how water is supplied to plants. Surface irrigation, also known as gravity irrigation, is the oldest form of irrigation and has been in use... c93a979dbb

Maginn Park It also has two artificial turf pitches Maginn Park is a football stadium in Buncrana, County Donegal, Ireland. Maginn Park has a floodlit grass pitch with a sprinkler system and a stand with 250 seats. representative games. It is used by the amateur Inishowen Football League for staging cup finals and other important matches. During the 2017 League of Ireland season, the ground served as the temporary home of Derry City c93a979dbb

U.S. Bank Center (Phoenix) Built in 1976, it is 407 feet (124 m) tall. The building was also the first high rise in Phoenix to be built with an automatic fire sprinkler system. It is the second tallest building in the state of Arizona. total of 31 above ground floors. List of tallest The US Bank Center is a high-rise office building located in Phoenix, Arizona c93a979dbb

Fire standpipes have two main types: "Wet" and "Dry". The terms describe their state during normal, non-firefighting situations. c93a979dbb

Center-pivot irrigation watered with sprinklers. Most center-pivot systems were water-powered; however, today most are propelled by electric motors. A circular area centered on a pivot is irrigated, often creating a circular pattern in crops when viewed from above (sometimes Center-pivot irrigation (sometimes called central-pivot irrigation), also called water-wheel and circle irrigation, is a method of crop irrigation in which equipment rotates around a pivot and crops are watered with sprinklers. A circular area centered on a pivot is irrigated, often creating a circular pattern in crops when viewed from above (sometimes referred to as crop circles, not to be confused with those formed by circular flattening of a section of a crop in a field) c93a979dbb
