M. pneumoniae is known to cause a host of symptoms such as primary atypical pneumonia, tracheobronchitis, and upper respiratory tract disease. Primary atypical pneumonia is one of the most severe types of manifestation, with tracheobronchitis being the most common symptom and another 15% of cases, usually adults, remain asymptomatic. Symptomatic infections tend to develop over a period of several days and manifestation of pneumonia can be confused with a number of other bacterial pathogens and conditions that cause pneumonia. Tracheobronchitis is most common in children due to a reduced immune system capacity, and up to 18% of infected children require hospitalization. Common mild symptoms include sore throat, wheezing and coughing, fever, headache, rhinitis, myalgia and feelings of unease, in which symptom intensity and duration can be limited by early treatment with antibiotics. Rarely, M. pneumoniae pneumonia results... 45935ae08e

Camel case The practice has various names and conventions. emphasize the differences between similar-looking product names such as predniSONE and predniSOLONE; and snake case, which uses underscores interspersed Camel case (sometimes stylized autologically as camelCase or CamelCase, also known as camel caps or more formally as medial capitals) is a writing format practice of writing phrases with capitalized words and yet without spaces or punctuation. The earliest known occurrence of a term for this style, InterCaps, was on Usenet in April 1990

The use of medial capitals as a convention in the regular spelling of everyday texts is rare, but is used in some languages as a solution to particular problems which arise when two words or segments are combined. In the scholarly transliteration of languages written in other scripts, medial capitals are used in similar situations. Medial capitals are sometimes traditionally used in abbreviations to reflect the capitalization that the words would have when written out in full, and they have come into use in unpunctuated abbreviations of academic titles, such as PhD and BSc, which now often replace Ph.D. and B.Sc. Initial symptoms of BFL include shortness of breath (dyspnea), and dry cough. These may be worse after sudden exertion or when exposed to temperature change, which can resemble... The cause of multiple myeloma is unknown. Risk factors include obesity, radiation exposure, family history, age and certain chemicals. There is an increased risk of multiple myeloma in certain occupations, due to occupational exposure to aromatic hydrocarbon solvents. Multiple myeloma is the result of a multi-step malignant transformation, and almost universally originates from the pre-malignant stage monoclonal gammopathy of undetermined significance (MGUS). As MGUS evolves into MM, another pre-stage of the disease is reached, known as smoldering myeloma (SMM). The first systematic and widespread use of medial capitals for technical purposes was the notation for chemical formulas invented by the Swedish chemist Jacob Berzelius in 1813. Since the early...

== Signs and symptoms == 45935ae08e BFL is diagnosed based on symptoms, and how these get worse on exposure to avian proteins. Radiology can show damage to the lungs, which has a characteristic "ground glass" appearance. Bronchoscopy shows chronic inflammation, with biopsies showing lymphocytosis and granulomatous tissue. BFL may be treated with steroids such as prednisone to reduce inflammation, and removal of exposure to avian proteins. If pulmonary fibrosis has not occurred, treatments tend to be very effective. 45935ae08e Stapp has received several accolades, including numerous RIAA certifications. However, medical professionals advise that abuse of analgesics Chronic headache, or chronic daily headache (CDH), is classified as experiencing fifteen or more days with a headache per month. Multiple sources recommend multimodal treatment, which is a combination of medicinal and non-medicinal remedies. Chronic headaches consist of different sub-groups, primarily categorized as chronic tension-type headaches and chronic migraine headaches. Some treatments are controversial and are still being tested for effectiveness. It is estimated that chronic headaches affect "4% to 5% of the general population". Medicinal and non-medicinal methods exist to help patients cope with chronic headache, because chronic headaches cannot be cured. The treatments for chronic headache are vast and varied. Suggested treatments for chronic headaches include medication, physical therapy, acupuncture, relaxation training, and biofeedback. Whether pharmacological or not, treatment plans are often created on an individual basis. In addition, dietary alteration and behavioral therapy or psychological therapy are other possible treatments for chronic headaches
