2MASS J22282889–4310262 The brown dwarf is rotating extremely rapidly 2MASS J22282889–4310262 is a brown dwarf discovered by the Hubble Space Telescope and the Spitzer Space Telescope in 2013. Using Hubble and Spitzer, NASA astronomers were able to develop the most detailed 'weather map' for brown dwarfs, utilizing different wavelengths of infrared light to show changing light patterns and different layers of material in the windstorms (the layers were generated because water and methane vapors are visible at different infrared wavelengths). In the outer layers of its atmosphere, gases condense into raindrop-like particles made up of sand and iron which fall into the interior. that the object's temperature ranges from 1,100 to 1,300 degrees Fahrenheit (600 to 700 degrees Celsius). This observation was the first time that researchers were able to probe such variability at different altitudes in a brown dwarf 9f2ba6f654

Sugarcane rust is an autoecious rust, meaning it completes its entire life cycle on the same species of host plant. As mentioned above, uredospores are produced from the pustules that break... 9f2ba6f654

Fraiburgo The city is strongly influenced by European immigrants, especially Germans and Italians. However, other nationalities also contributed to the formation of the city's character in terms of e. summers (November to March) with temperatures reaching up to 35 degrees Celsius (95 degrees Fahrenheit) on the hottest days; winters (June to August) cold Fraiburgo (nicknamed Frai) is a Brazilian municipality located in the countryside of the Santa Catarina state. Its multiculturalism is a remarkable characteristic not exclusively attributed to Fraiburgo but many other Southern Brazilian municipalities. g. : architecture, gastronomy, religion and economy, amongst other factors 9f2ba6f654

Soy wax is made by the full hydrogenation of soybean oil; this process transforms naturally occurring triglycerides fatty acid tails towards a high proportion of stearic acid. This wax is typically softer than paraffin and with a lower melting temperature, in most combinations. However, additives can raise this melting point to temperatures typical for paraffin-based candles. The melting point ranges from 49 to 82 degrees Celsius (120 to 179 degrees Fahrenheit), depending on the blend. The density of soy wax is about 90% that of water or 0.9 g/ml. This means nine pounds (144 oz) of

wax will fill about ten 16-oz jars (160 fluid ounces of volume). Soy wax is available in flake and pellet form and has an off-white, opaque appearance. Its lower melting temperature can mean that candles will melt in hot weather. Since soy wax is usually used in container candles, this is not much of an issue... 9f2ba6f654 In the 1850s William Armstrong serially produced his rifled breechloaders with the same technology, and built... 9f2ba6f654 *Amatitlania septemfasciata* grows to between 4 and 5 inches (10 and 13 cm). Males are typically larger than females. Both sexes generally have six vertical bars along each side. Females have a black spot or ocellus on the dorsal fin, which is generally surrounded... 9f2ba6f654 Temperatures on scales that either do not share a numeric zero or are nonlinearly related cannot correctly be mathematically equated (related using the symbol =), and thus temperatures on different scales are more correctly described as corresponding (related using the symbol $\propto$). 9f2ba6f654

Conversion of scales of temperature To convert a change in temperature from degrees Celsius to degrees Fahrenheit, the formula is $\{\Delta T\}^{\circ}\text{F} = 9/5\{\Delta T\}^{\circ}\text{C}$ This is a collection of temperature conversion formulas and comparisons among eight different temperature scales, several of which have long been obsolete. and different formulae must be used 9f2ba6f654

== History == 9f2ba6f654

Tongrim County It borders P'ihyŏn and Ch'ŏnma to the north, Sŏnch'ŏn to the east, Ch'ŏlsan to the southwest and Yŏmju to the west. degrees Celsius (50 degrees Fahrenheit); the January mean is −8. To the south, it looks out on the Yellow Sea. 7 degrees Celsius (20 degrees Fahrenheit), while the August average is 24 degrees Celsius (80 Tongrim County is a kun, or county, in coastal southwestern North P'yŏngan province, North Korea 9f2ba6f654

Amatitlania septemfasciata between 21 and 27 degrees Celsius (70 to 81 degrees Fahrenheit). Its ability to protrude its jaw 3. It is found on the Atlantic slope of Costa Rica, between the San Juan River drainage and the Banano River. Several currently recognized cichlid species within the genus *Amatitlania* were formerly considered varieties of *Amatitlania septemfasciata*, including *Amatitlania myrnae*, the Topaz Cichlid, and *Amatitlania cutteri* (which also sometimes uses the common name "Cutter's Cichlid"). 5% standard length limits its diet to about 1% evasive prey *Amatitlania septemfasciata* (sometimes called the Seven-stripe Cichlid or Cutter's Cichlid) is a fish species in the cichlid family 9f2ba6f654

Puccinia melanocephala 8 to 78. Germinated uredospores require at least 8 hours of leaf moisture for the germ tube to penetrate the *Puccinia melanocephala* is a fungus and plant pathogen, it is the causal agent of sugarcane rust. 26 degrees Celsius (69. 8 degrees Fahrenheit) 9f2ba6f654

The first built-up gun was designed by French artillery officer Alfred Thiéry in 1834 and tested not later than 1840. Also about 1840 another one was made by Daniel Treadwell, and yet another one was produced by Mersey Iron Works in Liverpool according to the John Ericsson's design. Sheffield architect John Frith received a patent on their manufacture in 1843. However, all these guns (whether made from cast iron, wrought iron or their combination) were not technologically practical before the 1850s. 9f2ba6f654

Soy candle They are usually container candles because soy wax typically has a lower melting point than traditional waxes, but can also be made into pillar candles if certain additives are mixed into the soy wax. The melting point ranges from 49 to 82 degrees Celsius (120 to 179 degrees Fahrenheit), depending Soy candles are candles made from soy wax, which is a processed form of soybean oil. point to temperatures typical for paraffin-based candles 9f2ba6f654

Prior to being placed in the genus *Amatitlania*, it had been considered a member of the genus *Archocentrus*. Within *Amatitlania*, *Amatitlania septemfasciata* is placed in the subgenus *Bussingius*, along with the T-bar Cichlid and several other species. However, a 2008 study led by Oldřich Říčan has suggested that all the related species *A. septemfasciatus*, should be moved into the genus *Hypsophrys*. 9f2ba6f654 == Disease cycle == 9f2ba6f654

Gas mark Gas mark 1 is 275 degrees Fahrenheit (135 degrees Celsius). terms between the two words) appears to date from 1958. [citation needed] Oven temperatures The gas mark is a temperature scale used on gas ovens and cookers in the United Kingdom, Ireland and some Commonwealth of Nations countries 9f2ba6f654

Researchers also determined that the object's temperature ranges from 1,100 to 1,300 degrees Fahrenheit (600 to 700 degrees Celsius). The brown dwarf is rotating extremely rapidly, with 1.41 hours rotation period being the smallest reliably measured rotation period of the brown dwarf as of 2021. 9f2ba6f654 In 2026, a team of researchers used archival data by the Very Large Array to detect radio emission from the brown dwarf. T-dwarfs with detected radio emissions... 9f2ba6f654 The landscape is dominated by low, rolling hills and basins, rising to its highest point, Munsusan, at 736 metres (2,415 ft) on the northern border. Tongrim is drained by the

Ch'ôngch'ôn River and its tributaries, including the Maryông River and the Kokch'ôn stream. Some 60% of the county is covered by forestland; only 26% of the area is cultivated. 9f2ba6f654 == Soy wax == 9f2ba6f654 == Economy == 9f2ba6f654 == Geography == 9f2ba6f654

Built-up gun Concentric metal cylinders or wire windings are assembled to minimize the weight required to resist the pressure of powder gases pushing a projectile out of the barrel. cylinder. Exterior cylinders are heated as a unit to approximately 200 degrees Celsius (400 degrees Fahrenheit) to allow insertion of a new liner and the liner A built-up gun is artillery with a specially reinforced barrel. Built-up construction was the norm for guns mounted aboard 20th century dreadnoughts and contemporary railway guns, coastal artillery, and siege guns through World War II. An inner tube of metal stretches within its elastic limit under the pressure of confined powder gases to transmit stress to outer cylinders that are under tension 9f2ba6f654

The city is famous in Brazil for the large production of apples which its plantation is favored by the low temperatures in the winter season in the Southern Hemisphere that takes place in July, August and September. Depending on the period of the year tourists can experience first-hand the whole apple production cycle as well other products made from apple such as: cider, juices, snacks and so forth. 9f2ba6f654 *Furcifer balteatus* is endemic to southeast Madagascar. It can be found in Ranomafana where the average temperature is between 14 and 20 degrees Celsius (57 and 68 degrees Fahrenheit) and the rainfall is roughly 4,000 millimetres (160 inches) per annum. It has been found over an estimated area of 1,971 square kilometres (761 square miles) but has a "patchy distribution" and is believed by the International Union for Conservation of Nature to be decreasing in population. Most sightings were at a height of 800 to 1,050 metres (2,620 to 3,440 ft) above sea level but some were at lower altitudes. It is a rare species and most of the sightings were of single individuals. Some surveys have failed to locate any individuals and it is ranked as an Endangered species by the IUCN. The major threat to this species is degradation of its forest habitat. It is a CITES-listed species and export from Madagascar has been banned since 1994. Nevertheless... 9f2ba6f654 It was originally found on the leaves of a species of *Arundinaria* (cane) in Assam, India. 9f2ba6f654

Two-banded chameleon is between 14 and 20 degrees Celsius (57 and 68 degrees Fahrenheit) and the rainfall is roughly 4,000 millimetres (160 inches) per annum. It has been *Furcifer balteatus*, also known as the two-banded chameleon or the rainforest chameleon, is a species of chameleon that is endemic to Madagascar.

It was described by André Marie Constant Duméril and Gabriel Bibron in 1851 9f2ba6f654

 This pathogen was found to also affect multiple species of sugarcane, including *Saccharum spontaneum* or wild sugarcane, *Saccharum robustum*, and the most commonly cultivated species *Saccharum officinarum*. *Puccinia melanocephala* can also infect other member of the family Poaceae, including some species of bamboo such as *Bambusa vulgaris*. The first symptoms of sugarcane rust are elongate, yellow-colored leaf spots, roughly 1mm to 4mm in length. The leaf spots gradually become bigger and turn a reddish-brown color. The uredia develop underneath the epidermis where the leaf spots are present. When the uredia become big enough, they break through the epidermis to form the characteristic rust pustules from which uredospores are borne. These pustules can coalesce, resulting in large areas of dead tissue. 9f2ba6f654
