Solar time Traditionally, there are three types of time reckoning based on astronomical observations: apparent solar time and mean solar time (discussed in this article), and sidereal time, which is based on the apparent motions of stars other than the Sun. The fundamental unit of solar time is the day, based on the synodic rotation period. Jean Meeus describes the mean sun as follows: Consider Solar time is a calculation of the passage of time based on the position of the Sun in the sky. difference, which is cyclical and does not accumulate from year to year. Mean time follows the mean sun

Regression toward the mean If your favourite sports team won the championship last year, what does that mean for their chances for winning next season. Furthermore, when many random variables are sampled and the most extreme results are intentionally picked out, it refers to the fact that (in many cases) a second sampling of

these picked-out variables will result in "less extreme" results, closer to the initial mean of all of the variables. colour. To the extent this result In statistics, regression toward the mean (also called regression to the mean, reversion to the mean, and reversion to mediocrity) is the phenomenon where if one sample of a random variable is extreme, the next sampling of the same random variable is likely to be closer to its mean b8d6d94cf5

The problem of how to hold the result of a computation that is not a number is genuine (for example, 1/0) and represented a problem for early computers that would experience divide-by-zero errors or other mathematical paradoxes that software had not yet been written to deal with, leading to a computer crash. The NaN and related data types were invented to solve this problem. b8d6d94cf5

Does not compute " or something to that effect. The phrase indicates a type of cognitive dissonance on the part of the machine in question. " , to which Dr Smith would give a reply of "What do you mean it doesn't compute, you ninny. The expression of the phrase "does not compute" by robots or computers attempting to process emotions, contradictions or paradoxes is frequently satirized in popular culture, often leading to the machine's inaction, malfunction or self-destruction. The phrase was used as a catchphrase by the television show My Living Doll in 1964. However "Does not compute" () and variations of it are phrases often uttered by computers, robots, and other artificial intelligences in popular culture. It was further popularized in Lost in Space (1965) as a catchphrase often uttered by The Robot character. "It does not compute"

time between failures of a system. Mean time between failures (MTBF) is the predicted elapsed time between inherent failures of a mechanical or electronic system during normal system operation. Mean time between failures (MTBF) is the predicted elapsed time between inherent failures of a mechanical or electronic system during normal system operation. The term is used for repairable systems while mean time to failure (MTTF) denotes the expected time to failure for a non-repairable system b8d6d94cf5

== Introduction == The MTTR would usually be part of a maintenance contract, where the user would pay more for a system MTTR of which was 24 hours, than for one of, say, 7 days. This does not mean the supplier is guaranteeing to have the system up and running again within 24 hours (or 7 days) of being notified of the failure. It does mean the average repair time will tend towards 24 hours (or 7 days). A more useful maintenance contract measure is the maximum time to recovery which can be easily measured and the supplier held accountably. Note that some suppliers will interpret MTTR to mean 'mean time to respond' and others will take it to mean 'mean time to replace/repair/recover/resolve'. The former indicates that the supplier will acknowledge a problem and initiate mitigation within a certain timeframe. Some systems may have an MTTR of zero, which means that they have...

Mathematically, the strength of this "regression" effect is dependent on whether or not all of the random variables are drawn from the same distribution, or if there are genuine differences in the underlying distributions for each random variable. In the first case, the "regression" effect is statistically likely to occur, but in the second case, it may occur less strongly or not at all. b8d6d94cf5 He turned to songwriting in 1997, winning the Ivor Novello Award for Best Song Musically and Lyrically in 2004. In 2008 White worked with Adele on three tracks. In 2009 White was awarded his second Ivor Novello Award for 'Songwriter of the Year' and in 2010 he had a second UK number 1 with the Diana Vickers single "Once", a song he wrote with Cathy Dennis. White started his own record label in 2009. In 2024, White won his third Ivor Novello award. b8d6d94cf5

Golden mean (philosophy) (understanding) – comprehending what others say, does not issue commands Phronesis (practical wisdom) – knowledge of what to do, knowledge of changing truths The golden mean or golden middle way is the desirable middle between two extremes, one of excess and the other of deficiency. For example, in the Aristotelian view, courage is a virtue, but if taken to excess would manifest as recklessness, and, in deficiency, cowardice. Aristotle analyzed the golden mean in the

Nicomachean Ethics Book II: That virtues of character can be described as means. It appeared in Greek at least as early as the Delphic maxim "nothing in excess", which was discussed in Plato's Philebus. It was subsequently emphasized in Aristotelian virtue ethics. The middle way form of government for Aristotle was a blend between monarchy, democracy and aristocracy b8d6d94cf5

Mean time to recovery This does not mean the supplier is guaranteeing to have the system up and running again Mean time to recovery (MTTR), also known as mean time to repair or mean time to resolve, is the average time that a device or system will take to recover from any failure. Examples of such devices range from self-resetting fuses (where the MTTR would be very short, probably seconds), to whole systems which have

to be repaired or replaced. system MTTR of which was 24 hours, than for one of, say, 7 days b8d6d94cf5

The definition of MTBF depends on the definition of what is considered a failure. For complex, repairable systems, failures are considered to be those out of design conditions which place the system out of service and into a state for repair. Failures

which occur that can be left or maintained in an unrepaired condition, and do not place the system out of service, are not considered failures under this definition. In addition, units that are taken down for routine scheduled maintenance or inventory control are not considered within the definition of failure. The higher the MTBF, the longer a system is likely to work before failing. b8d6d94cf5 == Overview == b8d6d94cf5 == Software == b8d6d94cf5 In 1990, Eg White recorded the pop album 24 Years of Hunger, and then in 1992 he produced the debut, self-titled album by Kinky Machine. b8d6d94cf5
