Born in Lichfield, Staffordshire, he attended Pembroke College, Oxford, until lack of funds forced him to leave. After working as a teacher, he moved to London and began writing for The Gentleman's Magazine. Early works include the poem London (1738), the biography Life of Mr Richard Savage (1744), the poem The Vanity of Human Wishes (1749) and the play Irene (1749). After nine years' effort, Johnson's A Dictionary of the English Language (1755) appeared and was acclaimed as "one of the greatest single achievements of scholarship". Later works included The History of Rasselas, Prince of Abissinia (1759... 14f9e25c03

Compounding became popular for railway locomotives from the early 1880s and by the 1890s were becoming common. Large numbers were constructed, mostly two- and four-cylinder compounds, in Germany, Austria, Hungary, and the United States. It declined in popularity due to a perceived increased maintenance requirement. Nonetheless, compound Mallets were built by the Norfolk and Western Railway up to 1952 and continued to be designed and built in France until the end of steam in the 1970's. French compound engines became highly developed, eventually incorporating reheaters between the high and low pressure stages as well as the initial use of superheaters, ultimately achieving the highest power-to-weight ratio and highest horsepower to fire grate-area ratio of any steam locomotives ever built. 14f9e25c03

Workplace wellness Workplace wellness programs have been Workplace wellness, also known as corporate wellbeing outside the United States, is a broad term used to describe activities, programs, and/or organizational policies designed to support healthy behavior in the workplace. concept of "high-level wellness" to encourage individuals to maximize their potential progress towards better living. It can also include flex-time for exercise, providing onsite kitchen and eating areas, offering healthy food options in vending machines, holding "walk and talk" meetings, and offering financial and other incentives for participation. This often involves health education, medical screenings, weight management programs, and onsite fitness programs or facilities or off site retreats 14f9e25c03

Companies most commonly subsidize workplace wellness programs in the hope they will reduce costs on employee health benefits like health insurance in the long run. Existing research has failed to establish a clinically significant difference in health outcomes, proof of a return on investment, or demonstration of causal effects of treatments. The largest benefits have been observed in groups that were already attempting to manage health concerns, which indicates a strong possibility of selection bias. 14f9e25c03
