The first drug that was used was a non-selective alpha blocker, named phenoxybenzamine and was used to treat BPH. Currently, several relatively selective alpha-1 antagonists are available. As of 2018, prazosin is the only alpha-1 blocker known to act as an inverse agonist at all alpha-1 adrenergic receptor subtypes; whereas tamsulosin and terazosin are both selective antagonists for all alpha-1 subtypes. To treat the condition, he used fair-colored makeup and possibly skin-lightening prescription creams to cover up the uneven blotches of color caused by the illness. The lighter skin and Jackson's nonconfirmation of his diagnosis resulted in speculation that he was trying to appear white. Jackson revealed he had vitiligo in 1993, and said he had not purposely bleached his skin and that he was proud to be black. ec19906b19
