

Verbascum Thapsus Great Mullein

Verbascum phlomoides *Verbascum phlomoides*, the orange mullein, woolly mullein (which often refers to *Verbascum thapsus*), or clasping-leaf mullein, is a plant species in the 6c03a4746d

It is a stout biennial or monocarpic perennial herb growing up to 1.5 m (4 ft 11 in) tall, producing flowers and seeds only once, during its second or a later year. The stems and leaves are densely woolly with pale grey to glaucous pubescence. The flowers are yellow, 18–25 mm diameter, with 5 orange stamens, all the stamen stems with dense white hairs. It can best be distinguished from the similar great mullein (*V. thapsus*) in all five stamens having dense white hairs on the stem; in *V. thapsus*, the lower two of the five stamens are hairless or only thinly hairy. 6c03a4746d

Verbascum pulverulentum It is native to western, central and southern Europe north to England (where its main range is in East Anglia) and southern Wales. *thapsus*) in all five stamens having dense white hairs on the stem; in *V. thapsus*, the lower two of the five *Verbascum pulverulentum*, the hoary mullein, is a species of flowering plant in the family Scrophulariaceae. distinguished from the similar great mullein (*V. It is a specialist on coastal shingle, and so is preadapted to human-influenced habitats such as old quarries and gravel pits, road verges, railway embankments, and similar disturbed stony ground. It has been introduced to Austria, Madeira, and Washington state in the US 6c03a4746d*

Verbascum thapsus *Verbascum thapsus*, the great mullein, greater mullein or common mullein, is a species of mullein native to Europe, northern Africa, and Asia, and introduced *Verbascum thapsus*, the great mullein, greater mullein or common mullein, is a species of mullein native to Europe, northern Africa, and Asia, and introduced in the Americas, Australia and New Zealand 6c03a4746d

Verbascum phoeniceum *Verbascum phoeniceum*, known as purple mullein, is a species of mullein that is part of the family Scrophulariaceae native to Central Europe, Central Asia 6c03a4746d

Aaron's beard meadowsweet), native to Eurasia, cultivated Verbascum thapsus (Great mullein, greater mullein, common mullein, Aaron's rod), native to Europe, northern 6c03a4746d

== References == 6c03a4746d It is the main food plant for the moth Nothris verbascella (Norfolk snout). 6c03a4746d Although commonly used in traditional medicine, no approved drugs are made from this plant. It has been used to make dyes and torches. 6c03a4746d

Cionus hortulanus and Verbascum species, while larvae feed on Water Figwort (Scrophularia auriculata), Common Figwort (Scrophularia nodosa) and Great Mullein (Verbascum thapsus) 6c03a4746d

It is a hairy biennial plant that can grow to 2 m tall or more. Its small, yellow flowers are densely grouped on a tall stem, which grows from a large rosette of leaves. It grows in a wide variety of habitats, but prefers well-lit, disturbed soils, where it can appear soon after the ground receives light, from long-lived seeds that persist in the soil seed bank. It is a common weedy plant that spreads by prolifically producing seeds, and has become invasive in temperate world regions. It is a minor problem for most agricultural crops, since it is not a competitive species, being intolerant of shade from other plants and unable to survive tilling. It also hosts many insects, some of which can be harmful to other plants. Although individuals are easy to remove by hand, populations are difficult to eliminate permanently. 6c03a4746d
