introduced by Gabe Mirkin in 1978. In 2014, he publicly revised his views for routine icing and complete rest after reviewing research on inflammation and tissue healing. Mirkin stated that prolonged icing and complete rest could delay recovery, noting the role of inflammation in the healing process and the potential drawbacks of extended inactivity. Current evidence suggests that routine icing should be reconsidered, though it may still be appropriate in cases where excessive swelling poses a risk to recovery. Ice has been used for injuries since at least the 1960s, following its use to successfully reattach a 12-year-old's limb. c328f02b10
