Data integrity The term is broad in scope and may have widely different meanings depending on the specific context - even under the same general umbrella of computing. It is at times used as a proxy term for data quality, while data validation is a prerequisite for data integrity. Data integrity is the maintenance of, and the assurance of, data accuracy and consistency over its entire life-cycle and is a critical aspect to the design Data integrity is the maintenance of, and the assurance of, data accuracy and consistency over its entire life-cycle and is a critical aspect to the design, implementation, and usage of any system that stores, processes, or retrieves data 4a5404644f

Pharmaceutical industry in India India is often described as the "pharmacy of the world," supplying around one-fifth of global demand for generic medicines and exporting pharmaceuticals to over 200 countries in 2023-24, with approximately 70% of exports destined for highly regulated markets such as North America and Europe. citing serious Data Integrity issues, including data deletion, manipulation or fabrication of test results. In the United States, Indian pharmaceutical companies supply nearly half of all generic prescriptions by volume. India is also the largest vaccine manufacturer globally by volume, accounting for over 60% of the world's vaccine production. According to Outsourcing Pharma in 2012, 75% of The pharmaceutical industry in India was valued at an estimated US\$50 billion in FY 2023-24 and is estimated to reach \$130 billion by 2030 4a5404644f

Data integrity is the opposite of data corruption. The overall intent of any data integrity technique is the same: ensure data is recorded exactly as intended (such as a database correctly rejecting mutually exclusive possibilities). Moreover, upon later retrieval, ensure the data is the same as when it was originally recorded. In short, data integrity aims to prevent unintentional changes to information. Data integrity is not to be confused with data security, the discipline of protecting data from unauthorized parties. 4a5404644f Goldacre argues in the book that "the whole edifice of medicine is broken", because the evidence on which it is based is systematically distorted by the pharmaceutical industry. He writes that the industry finances most of the clinical trials into its own products and much of doctors' continuing education, that clinical trials are often conducted on small groups of unrepresentative subjects and negative data is routinely withheld, and that apparently independent academic papers may be planned and even ghostwritten by pharmaceutical companies or their contractors, without disclosure. Describing the

situation as a "murderous disaster", he makes suggestions for action by patients' groups, physicians, academics and the industry itself.
