Pearson's chi-squared test is used to determine whether there is a statistically significant difference between the expected frequencies and the observed frequencies in one or more categories of a contingency table. For contingency tables with smaller sample sizes, a Fisher's exact test is used instead. dbbe34244c == Background == dbbe34244c

Billiard table More specific terms are used for specific sports, such as snooker table and pool table, and different-sized billiard balls are used on these table types. A billiard table or billiards table is a bounded table on which cue sports are played. An obsolete term is billiard board, used in the 16th and 17th centuries. In the modern era, all billiards tables (whether for carom billiards, pool, pyramid or snooker) provide an elevated flat surface usually made of quarried slate, that is covered with cloth (usually of a tightly woven worsted wool called baize), and surrounded by vulcanized rubber cushions.
