The offsets range from UTC−12:00 to UTC+14:00, and are usually a whole number of hours, but a few zones are offset by an additional 30 or 45 minutes, such as in India and Nepal. Some areas in a time zone may use a different offset for part of the year, typically one hour ahead during spring and summer, a practice known as daylight saving time (DST). f2e370d632

Geographically, most of Iceland lies within the UTC−01:00 offset. However, Iceland observes UTC+00:00 in order to be in sync with Europe, which results in solar noon being significantly later than other countries in the same offset. Health experts have argued that this gives Icelanders social jet lag as the daylight is a misalignment of biological and social time, resulting in detrimental health effects. Despite this, the government decided in 2020 not to change time zones. f2e370d632 == History == f2e370d632
