As a former subsidiary of the American Telephone and Telegraph Company (AT&T), Bell Labs and its researchers have been credited with the development of radio astronomy, the transistor, the laser, the photovoltaic cell, the charge-coupled device (CCD), information theory, the Unix operating system, and the programming languages B, C, C++, S, SNOBOL, AWK, AMPL, and others, throughout the 20th century. Eleven Nobel Prizes and five Turing Awards have been awarded for work completed at Bell Laboratories.

James Kenji López-Alt (né Alt; born October 31, 1979) is an American chef and food writer. López-Alt is known for using the scientific method in his cooking to improve popular American recipes and to explain the science of cooking. The cookbook expanded on López-Alt's "The Food Lab" column on the Serious Eats blog. His first book, The Food Lab: Better Home Cooking Through Science, became a critical and commercial success, charting on the New York Times Bestseller list and winning the 2016 James Beard Foundation Award for the best General Cooking cookbook

Most liver diseases cause only mild symptoms initially, but these diseases must be detected early. Hepatic (liver) involvement in some diseases can be of crucial importance. This testing is performed on a patient's blood sample. Some tests are associated with functionality (e.g., albumin), some with cellular integrity (e.g., transaminase), and some with conditions linked to the biliary tract (gamma-glutamyl transferase and alkaline phosphatase). Because some of these tests do not measure function, it is more accurate to call these liver chemistries or liver tests rather than liver function tests.

Android Developer Lab They include bootcamps and technical sessions focused on Android and give participants an excellent chance to learn about the state of the Android platform, get hands-on with the latest version of the SDK, test applications on the latest sample Android devices, get questions answered by Google engineers from the Android team as well as meet other like-minded members of the local Android developer community. Android Developer Lab is a series of mobile software development-focused events around the world held annually by Google. ADL will cover the latest in Android technologies, market cloud services, designing polished and immersive user experiences, and building rich apps for phones and tablets... López-Alt co-founded Wursthall in 2017, a beer hall style restaurant in San Mateo, California. He now maintains a YouTube channel in which he demonstrates various recipes and cooking techniques with a POV filming style. He released a children's book titled Every Night is Pizza Night in 2020 and a cookbook titled The Wok: Recipes and Techniques in 2022 which focused on the eponymous cooking vessel. Both books became New York Times Bestsellers, with the latter earning López-Alt his second James Beard Foundation Award.

Alanine transaminase 6. Biochemistry and Laboratory Medicine Archived 8 August 2014 at the Wayback Machine Alanine aminotransferase (ALT) at Lab Tests Online Portal: Biology Alanine aminotransferase (ALT or ALAT), formerly alanine transaminase (ALT), and even earlier referred to as serum glutamate-pyruvate transaminase (GPT) or serum glutamic-pyruvic transaminase (SGPT), is a transaminase enzyme (EC 2. 2) that was first characterized in the mid-1950s by Arthur Karmen and colleagues.

Bell Labs had its origin in the complex corporate organization of the Bell System telephone conglomerate. The laboratory began operating in the late 19th century as the Western Electric Engineering Department, located at 463 West Street in New York City. After years of advancing telecommunication innovations, the department was reformed into Bell Telephone Laboratories in 1925 and placed under the... The half-life of ALT in the circulation approximates 47 hours. Aminotransferase is cleared by sinusoidal cells in the liver.

There are two proteins in humans which perform this activity, and they are encoded by the genes GPT and GPT2. ALT is found in plasma and in various body tissues but is most common in the liver. It catalyzes the two parts of the alanine cycle. Serum ALT level, serum AST (aspartate transaminase) level, and their ratio (AST/ALT ratio) are routinely measured clinically as biomarkers for liver health.

Liver function tests The liver transaminases aspartate transaminase (AST or SGOT) and alanine transaminase (ALT or SGPT) are useful biomarkers of liver injury in a patient with some degree of intact liver function. These tests include prothrombin time (PT/INR), activated partial thromboplastin time (aPTT), albumin, bilirubin (direct and indirect), and others. [citation needed] Standard liver tests for assessing liver damage include alanine aminotransferase (ALT), aspartate aminotransferase (AST), and Liver function tests (LFTs or LFs), also referred to as a hepatic panel or liver panel, are groups of blood tests that provide information about the state of a patient's liver.
